                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Op
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a protein derived from an enterically transmitted non-A/non-B viral hepatitis agent. The viral proteins are useful for detecting infection by the enterically transmitted non-A/non-B (BT-NANB/HBV) hepatitis viral agent. The proteins are also useful for producing vaccines for immunising an individual against HBV hepatitis viral agent. The DNA fragments are useful for identifying and sequencing the entire viral agent and for assaying the viral agent in an infected sample. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                    New proteins derived from an enterically transmitted non-A/non-B (ET-NANB) viral hepatitis agent, useful for diagnosing ET-NANB infection and producing vaccines for immunizing an individual against ET-NANB hepatitis viral agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

This sequence represents a Hepatitis E viral hollow particle protein. This polypeptide can be used to raise antibodies to detect HEV infection in samples, e.g. by immuno-assay based techniques, and the nucleic acid can be used for the same in nucleic acid hybridisation assays. The polypeptides and nucleic acids allow more accurate detection of HEV than previously possible
                                                                                                                                                                                                                                                            ProvalProAspValAspSerArgGlyAlaIleLeuArgArgGlnTyrAsnLeuSerThr

62K antigen (AAR96091) comprises the C-terminal 549 amino acids of hepatitis E virus (HEV) Burma strain capsid protein (see also AAR96089). It is obtd. by PCR amplification of HEV Burma ORF-2 (AAT27107), insertion of amplified DNA (AAT27109) into vector pGBX and expression in B. colls. Expression of full-length ORF-2 in Sf9 insect cells using a baculovirus system also results in prodn. of 62K antigen (see also AAR96103). 62K represents an improved antigen, in comparison to bacterial expressed proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties. (Updated on 16-OCT-2003 to standardise OS field)

HEV is a non-enveloped virus. HEV polypeptide is useful for studying the pathogenesis of HEV and monitoring treatment efficacy in subjects undergoing treatment for HBV. The polypeptide is used as a reagent to detect HBV and as a vaccine to treat or prevent HEV infection. The present sequence is HBV long capsid protein encoded by open reading frame 2, also referred as pORF2

```
DNA (AAT27109) coding for the 62K antigen (AAR96091) of hepatitis E virus (HEV) Burma strain capsid protein was cloned into baculovirus expression vector pBluBacIII and recombinant 62K was expressed in Sf9 insect cells. High levels of expression were obtd, and the recombinant 62K was obtd. in over 95% purity. However, C-terminal processing resulted in the deletion of 9 or 23 amino acids from 62K, giving 2 related polypeptide species (AAR96101 and AAR96103). Similar results were obtd. with HEV Mexico 62K antigen (see also AAR96102 and AAR96104). Recombinant 62K represents an improved antigen, in comparison to bacterial expressed proteins, for use in HEV diagnostic assays, and also has excellent immunogenic properties. 01-FEB-1994 (Rel. 28, Created)
01-FEB-1994 (Rel. 28, Last sequence update)
01-FEB-1994 (Rel. 28, Last annotation update)
Structural protein 2 precursor (ORF2).
Heparitis E virus (strain Pakistan) (HEV).
Viruses; ssRNA positive-strand viruses, no DNA stage;
Heparitis B-like viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           660

Proc. Natl. Acad. Sci. U.S.A. 99:996-1001(2002).
-!- FUNCTION: Seems to be the binding site for several of the fact involved in protein synthesis and appears to be essential for accurate translation (By similarity).
-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                  Clostridium perfringens.

Oxygen-evolving enhancer protein 3, chloroplast precursor (OEE3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  isopropylmalate.
--- PATHWAY: Leucine biosynthesis; second step.
--- SUBUNIT: Heterodimer of leuC and leuD (By similarity).
--- SIMILARITY: Belongs to the leuD family. LeuD 2 subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-09-851-410A-6_COPY_5147_7129 (1-1983) x LED1_THEMA (1-166)
